

# Underground Tank Monitoring

## CENTERON WEBVIEW FOR UNDERGROUND TANK MONITORING

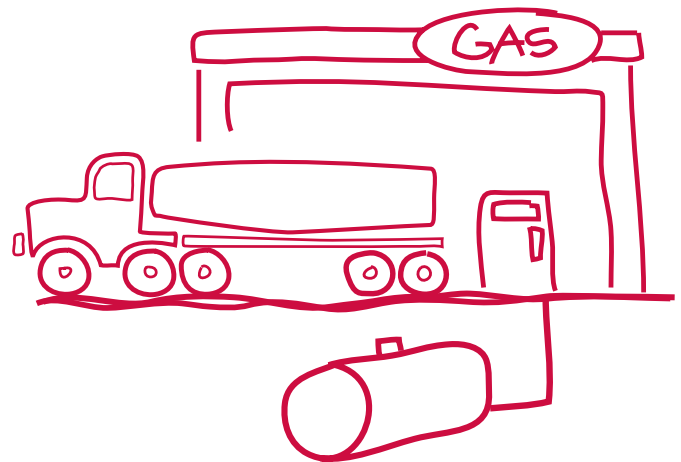

Centeron WebView now has the ability to interface with previously installed, third party underground tank monitoring equipment and display tank inventory level on the Centeron Data Center. This added feature lets you remotely view the inventory status of all your tanks, above ground and underground, at one time in one location for more effective planning of your product needs. Set up is very easy with tank information displayed in standard WebView format.

### Features:

- Interfaces with equipment manufacturer's modem. No additional hardware is required
- Set up and revise the reporting schedule from your WebView account
- All standard WebView reporting features are supported
- Tanks can be "Polled" at any time to retrieve current inventory status
- Optional email and fax alerts are sent when critical inventory levels are reached
- Does not interfere with or alter any pre-existing schedules or operations

### The Centeron System

We start with an easy to install monitor. It's wireless, so no special know-how or tools are needed. It's powerful, too. Our DSSS radio technology is far superior to the narrow bandwidth radios found in other wireless systems. That means you receive your data even in the harshest environments.

The monitor sends the tank level data to the controller. The controller collects the data then sends it to the Centeron Data Center. From there, you can retrieve your info anytime, wherever you are.

Just think about what that information can mean to your business. An up-to-date, accurate account of tank level allows you to deliver your product when it needs to be delivered. Centeron puts you in control so you can manage your business better.

Call 1-865-981-3118 and speak directly to a Robertshaw applications engineer.

*Exceptional DSSS radio technology is superior to narrow band systems, resulting in more reliable communications. So advanced, it's already the recipient of 12 patents, with additional pending.*

# Centeron®

The World's No. 1 Wireless Tank Monitoring System

## CENTERON UST REMOTE MONITORING SERVICE

Part No.	Description
UST001	Set up and initialization of Veeder-Root TLS 350 for remote monitoring of underground tank equipment. Polling capability. A dedicated phone line is required.
UST002	Set up and initialization of Veeder-Root TLS 350 for remote monitoring of underground tank equipment. Automatic call in only – A shared or dedicated phone line is required.
UST003	Set up and initialization of Red Jacket ST for remote monitoring of underground tank equipment. Polling capability. A dedicated phone line is required.
