NEW SATCOMM GATEWAY SATELLITE SYSTEM FOR REMOTE SITES

CENTERON EXPANDS ITS CAPABILITIES

MARYVILLE, TN – October 2004 – In order to expand the capabilities of the Centeron system to receive automated tank level measurements from remote tank storage facilities, Robertshaw introduces the Centeron SatComm Gateway System. The SatComm Gateway receives tank level information from any Centeron Tank Monitor and transmits the data to the Centeron Data Center using the Orbcomm Low Earth Orbit satellite network.

The Sat Comm Gateway is ideally suited for use in mining pits, quarries, construction sites, offshore, rural and wilderness tank storage facilities where phone lines and cellular communication is either unavailable or unreliable.

“The SatComm Gateway System is very robust and the first choice for those remote locations where reliability is critical” stated David Cahill, Director of Centeron Products. “You can count on getting your tank data on time, every time with the SatComm Gateway. It works with all the Robertshaw Intrinsicly Safe tank monitors so you have the best system available today.”

The SatComm Gateway supports up to 25 Centeron tank monitors with satellite coverage throughout the US, Canada, Mexico, Central and South America. It is remotely

setup and revised via a standard Centeron WebView account, which provides for convenient operation and little or no maintenance. The SatComm Gateway is equipped with three alarm levels for each tank that can be delivered via phone, fax, pager or e-mail.

Just the Facts

The SatComm Gateway System is housed in a Nema 4X enclosure for operation in all weather conditions. 110-240 VAC line powered and 12 VDC versions are offered. It's supplied with a matched satellite antenna for optimum performance. An optional solar power system is also available.

About Centeron

Centeron Wireless Tank Monitoring and Sensing System is designed to help companies that monitor tanks have maximum control over product distribution, collection and overall vessel management for a variety of industries including petroleum, propane, chemical, agriculture, pharmaceuticals, food and beverage, and water and waste water treatment. Developed by Robertshaw Industrial Products Division, an Invensys company, this leading-edge technology helps companies build profits through cost savings from fewer trips per site, reduced fleet size and the elimination of unnecessary trips such as emergency fills. Headquartered in Maryville, Tennessee, Robertshaw offers unique combinations of quality products and advanced technological devices designed for use across a broad range of industries.
