CENTERON NOW READING EXISTING UST MONITORING EQUIPMENT

AST and UST Tank Level Information All in One Convenient Location

MARYVILLE, TN – October 2004 – The Centeron tank monitoring system now has the ability to interface with previously installed, third party underground tank monitoring equipment and display tank inventory level on the Centeron Data Center. The Centeron Underground Tank Monitoring System enables the user to remotely view the inventory status of all above ground and underground tanks, at one time in one location for more effective planning of product needs.

“Many of our customers wanted to see their above ground and underground tank data at the same time, on the same system” stated David Cahill, Director of Centeron Products. “So Robertshaw developed an interface for the Centeron Data Collector that can retrieve tank information from existing third part underground tank monitoring equipment. In most cases, no additional hardware is needed, and we can have you up in running in no time.”

The Underground Tank Monitoring System directly interfaces with most major underground tank monitoring equipment. Customers are able to view tank information, setup and revise the reporting schedule online from their Centeron Data Center account. All standard WebView reporting features are supported and tanks can be “polled” at any time to retrieve current inventory status. The addition of the Centeron Underground Tank Monitoring System finally lets Centeron users see their entire inventory on one system so they can manage their business more effectively.

About Centeron

Centeron Wireless Tank Monitoring and Sensing System is designed to help companies that monitor tanks have maximum control over product distribution, collection and overall vessel management for a variety of industries including petroleum, propane, chemical, agriculture, pharmaceuticals, food and beverage, and water and waste water treatment. Developed by Robertshaw Industrial Products Division, an Invensys company, this leading-edge technology helps companies build profits through cost savings from fewer trips per site, reduced fleet size and the elimination of unnecessary trips such as emergency fills. Headquartered in Maryville, Tennessee, Robertshaw offers unique combinations of quality products and advanced technological devices designed for use across a broad range of industries.
